^V Flower pest ratings for symptoms of feeding by arthropods and infestation by disease pathogens on a 1 to 7 scale: 7- all flowers were free from arthropod feeding scars and diseased tissue in the form of spots, blights, or tissue distortion, symptomatic of plant dysfunction caused by a pathogen; 4- average foliage condition, minimal pest damage to tissue, but flowers was still acceptable; 1- flowers severely infested and damage unacceptable, making or flowers undesirable. Foliage was healthy during the entire season.

^w Overall pest rating = (average arthropod + disease ratings for foliage)/2, where cultivars ≥ 5 were considered outstanding, 4 to 4.9 as good performers, and ≤ 3.9 as fair to poor.

^x The formula for overall performance = [foliage and flower overall ratings (Table 2) + overall pest ratings/2].

^y Mean separation within classes by LSD, P < 0.05.
